Hold Down Kit accessory standard for PP Qube 335.

Using your Porta Potti®

To ensure effective functionality and optimum performance of the toilet system, Thetford have designed uniquely formulated toilet Additives and rapid dissolving Aqua Soft toilet paper. Thetford toilet Additives prevent unpleasant odours, suppress gas formation and keep the inside of the waste holding tank clean. By promoting the decomposition of solids in the waste holding tank, the Additives also prevent blockages when emptying.

To find out more information relating to which Thetford Additive best suits your needs, please refer to the Thetford Toilet Care brochure.

With average use the Porta Potti can be used for 3-5 days before the waste tank requires emptying. Simply and hygienically the waste holding tank of the Porta Potti can be detached and taken to the nearest waste disposal point.

To empty, simply twist the integrated emptying spout outwards, unscrew the cap, push the vent button to allow air to enter the waste tank (to avoid any splashing) and then pour waste out.

Clever and convenient.

Ask your Thetford stockist for more information relating to optional accessories including choice of flushing systems and replacement spare parts.
